

EXAZON RESEARCH — MASTER SCRIPT

Complete English Version

0. Pitch Kaise Karein — Delivery, Confidence & Yaad Rakhne Ka Pura System

Ye section sirf CONTENT nahi, DELIVERY ke baare mein hai — kaise bologe, kaise confident dikhoge, aur agar exact line bhool bhi jao to kaise recover karoge. Isse pehle 13 sections samajhne ke baad, ise apna "operating system" bana lo.

Stage Entry — 2-Second Pause Rule

© THE 2-SECOND RULE

Jaise hi call ya meeting start ho, bolne se pehle 2 second ruko — ek slow breath lo, halka sa smile karo, phir bolna start karo.

Ye 2 second nervous energy ko settle karta hai aur voice steady nikalti hai. Jaldi bolna hi sabse zyada 'nervous' sunai deta hai — slow start = confident start.

Pitch Delivery Pattern — Hook → Proof → Number → Close

📌 THE 4-STEP DELIVERY PATTERN

Har pitch section ko isi pattern mein dalo, exact wording nahi:

1. **HOOK** — Ek line jo dhyān kheenche ("Hum quality-vs-volume paradox solve karte hain").
 2. **PROOF** — Ek mechanism dikhao (ExaVerify 5-layer, ya encrypted ID mapping).
 3. **NUMBER** — Ek confidence-building number bolo (70+ countries, 25,000+ panel, 72 hours).
 4. **CLOSE** — Client ko agla step do ("Chahiye to hum abhi 20-complete soft launch run kar sakte hain").
- Is 4-step skeleton ko yaad rakho — baaki content usi ke around khud-ba-khud fit ho jayega.

Live Objection Recovery — The L.A.B. Formula

✍ L.A.B. — JAB EXACT LINE BHOOL JAO

Agar meeting mein exact jawab yaad na aaye, panic mat karo — L.A.B. use karo:

L — Listen: Client ki पूरी बात sunlo, beech mein mat kaato.

A — Acknowledge: "Ye bahut valid concern hai" jaisa ek line bolke respect do.

B — Bridge: Apne logic-based answer pe aa jao (Section 6/8 wala core idea) — exact script nahi, sirf logic.

Isse aap kabhi 'blank' nahi lagoge — hamesha in-control lagoge, chahe exact line yaad ho ya na ho.

Voice & Body Confidence Tricks

👤 VOICE & BODY HACKS

Numbers bolte waqt thoda slow ho jao aur ek chhoti si pause do (jaise "...25,000 se zyada active panelists") — isse number zyada powerful lagta hai.

Call se 2 min pehle 'power pose' karo (seedha khade ho ke, haath kamar pe) — ye confidence trigger karta hai.

Smile karke bolo, chahe phone/video call ho — voice tone automatically warm aur confident sunayi deta hai.

Pause ke liye kabhi maafi mat maango — silence weakness nahi, control ka sign hai.

Antique Trick — The Memory Palace (2000+ Saal Purani Greek Technique)

III MEMORY PALACE — EXAZON OFFICE WALKTHROUGH

Ye sabse purana aur powerful memory trick hai jo Greek/Roman orators use karte the ("Method of Loci"). Apne dimaag mein Exazon office ka ek mental walkthrough bana lo — har section ek room/spot pe rakh do:

Reception → Section 1 (Aapka Intro)

Meeting Room → Section 2 (Company Overview)

Server Room → Section 3 (ExaVerify Security)

Vault/Locker → Section 4 (Panel Size Numbers)

HR Desk → Section 5 (Panelists Sourcing)

Conference Table → Section 6 (Objections Q&A)

QC Lab → Section 7 (Quality Control Hub)

Legal Cabin → Section 8 (Objections & Commercials)

Accounts Desk → Section 9 (Payment Terms)

Notice Board → Section 10 (Discovery Questions)

Locked Drawer → Section 11 (Selective Clients)

Testing Room → Section 12 (Soft Launch)

Exit Door → Section 13 (Follow-up Email)

Jab bhi bolna ho, dimaag mein isi office mein 'chalo' — ek room se dusre room, aur har room apne aap agla topic yaad dila dega.

Spaced Repetition Schedule (Practice Calendar)

17 4-DIN KA PRACTICE PLAN

Din 1: Poora doc ek baar padho, samjho — ratta nahi.

Din 2: Sirf tip boxes dekh ke apne shabdon mein bolke practice karo.

Din 3: Bina dekhe, Memory Palace walkthrough karke poora pitch bolo.

Din 7: Ek revision aur karo — is baar kisi ko (dost/mirror) practice pitch do.

1. Introduction: Me and the Company

YAAD RAKHNE KA TARIKA

Sirf 3 point yaad rakho — KAUN (Founder/MD Shavaz), KYUN bana firm (boutique speed + Tier-1 quality gap), aur BACKGROUND (MyWorld → Global Opine → MBA Symbiosis). Apne alfaazon mein bolo, exact pitch line-by-line mat ratto.

Personal Introduction (Founder's Pitch)

EXECUTIVE ELEVATOR PITCH

"Thank you for taking the time to e-meet with me today.

I am Shavaz, the Founder and Managing Director of Exazon Research. I established the firm in May 2026 to bridge a critical gap in the market research industry: delivering boutique-agency responsiveness alongside Tier-1 methodological data quality.

In my current role, I drive the company's strategic vision and oversee all internal divisions, including global business development, international account bidding, and daily operations.

My operational focus centers on building cross-border strategic alliances and managing large-scale global data panels across the B2B, healthcare, tech, and financial sectors.

To ensure the highest level of data integrity for our clients, I designed and implemented ExaVerify™, Exazon's proprietary multi-layer quality framework. This data-cleansing protocol utilizes AI anomaly detection, real-time linguistic verification, and rigorous security scans to prevent sample fraud."

Professional Background and Industry Experience

My leadership at Exazon is backed by an extensive background in the industry.

- MyWorld Research (Jan 2025 – May 2026): Managed complex initiatives and end-to-end project life cycles as Procurement Manager.
- Global Opine Research (2019 – 2024): Served 5 years as Senior Market Research & Data Analyst, heavily focusing on global B2B, consumer, and healthcare data collection.
- Education: Holds an MBA degree from Symbiosis, Pune.

2. Company Overview

💡 YAAD RAKHNE KA TARIKA

Ek sentence mein pura pitch yaad rakho: "B2C/B2B/Healthcare panels, 70+ countries, 40M+ respondents, hum quality-vs-volume paradox solve karte hain." Baaki poori detail isi core idea ke around ghoomti hai.

COMPANY OVERVIEW PITCH

"To give you a high-level overview, Exazon Research specializes in Market Research, Strategic Intelligence, and complex fieldwork execution — including data operations and sampling.

We focus heavily on delivering high-integrity proprietary panels across B2C, Premium B2B, and specialized Healthcare verticals in the US, UK, and APAC regions. We serve major global brands and healthcare sectors across 70+ countries with access to 40M+ verified, richly profiled human respondents.

The core reason global agencies partner with us is simple: We solve the quality-vs-volume paradox. While the market currently struggles with high reconciliation rates, ghost completes, and server-side fraud, Exazon has engineered an internal data validation framework that keeps client-side rejections strictly below a verifiable threshold."

Capabilities & Market Feasibility (What You Can Deliver)

Currently, our internal infrastructure allows us to support both continuous tracking studies and ad-hoc custom requests:

- B2B Capacity: Deeply profiled panels targeting Decision Makers, IT Decision Makers (ITDMs), C-suite Executives, and SMB Owners.
- Healthcare Capacity: Route-verified patient panels and specialized Healthcare Professionals (HCPs / Physicians).
- B2C & Consumer Trackers: Seamlessly absorb stable monthly volume requirements for multi-wave tracking studies.
- We execute this using a balanced mix of proprietary Double Opt-In (DOI) panels and strictly monitored, compliant programmatic routing.

3. Security & Anti-Fraud Architecture

💡 YAAD RAKHNE KA TARIKA

5 layers hain — inko ek chain ki tarah yaad rakho: Fingerprint → Geo-IP → Behavior → Identity → Technical. Har layer ka sirf ek keyword pakdo (bot, VPN, speeder, OTP, proxy), poora sentence nahi.

What truly sets us apart is our ExaVerify™ Quality Architecture. We never pass traffic blindly. Before any respondent hits your client-side link, they must clear our multi-layered pre-screening protocol:

- 1) Digital Fingerprinting & Device Analytics: Analyzes canvas elements and hardware footprints to eliminate duplicate respondents and machine-generated bot patterns.

- 5
- 1) 2. Real-Time Geo-IP Verification: Ensures US/UK respondents genuinely reside on clean, localized residential IPs — stripping away datacenter proxies, commercial VPNs, and TOR networks.
 - 2) 3. Behavioral Red-Flagging: Traps speeders, straight-liners, and scans for gibberish open-ended inputs before they pollute your dataset. */data prob*
 - 3) 4. Identity Verification: Every panelist undergoes multi-point profiling across 400+ distinct attributes, backed by OTP verification (unique phone/email) to prevent duplicate accounts. *+ fill correct dob + Address + Gender + phone + email + Hm/ok*
 - 5) 5. Technical Anti-Fraud: Real-time IP scrubbing, geo-validation, and VPN/proxy detectors automatically block bots, duplicate users, or location-masking attempts.

Because of this aggressive pre-screening, our partners experience incredibly smooth data reconciliations, allowing *them* you to deliver clean data to your end-clients on time.

4. Panel Size (Dynamics & Benchmarks)

YAAD RAKHNE KA TARIKA

Ye sabse zyada rote-memorization wala hissa hai — flashcard bana ke alag practice karo. Key numbers: 25,000+ core panel, 1.5M+ extended reach, 10–25% participation, <5% opt-out, 384 = margin-of-error benchmark, formula = $\text{Sample} \div \text{Response Rate} + 20\% \text{ buffer}$. Roz 5 min practice.

- 1) We maintain a highly *vetted* proprietary panel of 25,000+ deeply profiled, active respondents across our primary markets. *verified* However, we don't believe in just holding dead databases or relying on static lists. 100 well received, deeply profiled respondents will always crush 5,000 unverified or self-selected sign-ups. If a panel grows too large without constant cleaning, you run into inactive decay, i.e. profiles become outdated and vulnerable to bot farms.
- 2) For broader and highly niche demographics, we integrate with secure, strategic field partners, giving us an extended reach of over 1.5M validated profiles globally. This gives you the perfect balance — a highly responsive, trusted core panel for rapid turnarounds and massive scale whenever you need to expand.
- 3) We focus on Active Yields rather than dead databases. Having a list of 10M inactive emails on a spreadsheet is useless. What we offer is an active, responsive and highly secure human network. This hybrid model gives you the best of both worlds.
- 4) Furthermore, we run 90-day profile updates to ensure that demographic data, job titles and purchasing behaviors are always current and updated. We focus on keeping a panel highly active and aiming for a 10% to 25% monthly participation rate and keeping our opt-out rates below 5%.

Short Note: Core Panel vs. Extended Reach = PANEL SIZE

- Core Proprietary Panel: We maintain 25,000+ deeply profiled, highly active respondents across primary markets.
- Extended Global Reach: For broader and highly niche demographics, we integrate with secure, strategic field partners, giving an extended reach of 1.5M+ validated profiles globally.
- Active Yield Philosophy: 100 active, deeply profiled respondents beat 5,000 unverified sign-ups. A database of 10M inactive emails is useless; we offer an active, highly secure human network.
- Panel Maintenance: If a panel grows without constant cleaning, you run into inactive decay (outdated profiles vulnerable to bot farms). We execute 90-day profile updates to keep demographic data, job titles, and purchasing behaviors current.
- Engagement Metrics: We target a 10% to 25% monthly participation rate and keep opt-out rates strictly below 5%.

Industry Contact & Response Benchmarks

Audience Type	Contact/Open Rate	Response/Completion Rate	Key Strategy & Approach
CR RR B2C / Consumer <i>45-55% 15-25%</i>	45% – 55% <i>15% 45%</i>	15% – 25%	Multi-channel outreach (Email + Mobile SMS). Fast and engaging surveys yield high incidence rates and rapid turnarounds.
CR RR B2B / Professionals <i>30-40% 8-12%</i>	30% – 40% <i>15% 40%</i>	8% – 12% <i>11/16</i>	Hyper-personalized invites for time-poor professionals. Vetted panel relationships keep completion rates at 8–12%.
CR RR HCPs / Healthcare <i>25-35% 5-8%</i>	25% – 35% <i>5% 35%</i>	5% – 8% <i>11/16</i>	Closed medical networks, with premium honorariums (incentives) and short 5–7 minute questionnaires.

For B2C campaigns, we leverage multi-channel outreach — combining email with optimized mobile SMS. This gives us a solid Contact/Open Rate of 45–55%. Because consumer surveys are fast and engaging, we comfortably achieve a 15% to 25% Completion Rate. Since the audience criteria are usually broad, our Incidence Rate stays high, allowing rapid turnaround times. *CR = 45-55% / RR = 15-25%*

B2B requires a completely different approach because corporate professionals are time-poor. We maintain a highly active 30–40% Contact Rate through hyper-personalized invites. In the current market, an 8% response rate is standard, but due to our vetted panel relationships, we consistently hit an 8% to 12% Completion Rate. We strictly screen for actual decision-makers, keeping our data pristine. *CR = 30-40% / RR = 8-12%*

Healthcare is the most critical asset of our panel. Doctors and specialists have zero free time. Our contact rate through closed medical networks sits at 25% to 35%. For surveys, a 5% to 8% Response Rate is an excellent and honest benchmark for high-value physicians. However, we counter this low response rate by offering premium, industry-compliant honorariums (incentives) and keeping the questionnaires under 5–7 minutes to respect their clinical schedule. *CR = 25-35% / RR = 5-8%*

Panel Math Formulas & Sample Calculations

Panel Size is always greater than Sample Size due to response rates and screening disqualifications.

- Definitions: Panel Size = Total Database (Invited) | Sample Size = Completed Surveys Needed | Response Rate = % of invited who respond.
- Margin of Error Benchmark: 384 completed responses gives a statistically reliable $\pm 5\%$ margin of error for almost any large population.

PANEL MATHEMATICS

Formula: Required Panel Size = (Desired Sample Size ÷ Expected Response Rate) + 20% Safety Buffer
 Calculation Example (Running 1 study/month): Desired Sample Size: 400 completed responses. Expected Response Rate: 20% (0.20). Initial Invites Required: $400 \div 0.20 = 2,000$ respondents. Add 20% Buffer (for opt-outs or changed emails): +400 respondents. Ideal Standing Panel Size = 2,400 active panelists.

Recommended Panel Size Guidelines ('Rules of Thumb')

- B2B Niche / SaaS Products: 150 – 500 Active Participants. (B2B professionals have high value but low availability; a tight, highly engaged circle is best).
- B2C / Mid-Market Brands: 1,500 – 3,000 Active Participants. (Gives enough padding to run multiple consumer studies per month without survey fatigue).
- Broad Global / Enterprise Research: 10,000+ Active Participants. (Necessary to represent entire international market segments across distinct regions).

5. Panelists

💡 YAAD RAKHNE KA TARIKA

Ye ek simple list hai, ratta mat lagao. 3 sourcing channels (Publisher Networks, LinkedIn/B2B, API Programmatic) + 3 retention tactics (cleaning, rewards, referrals) — story ki tarah bol ke practice karo.

THANK YOU, for the opportunity to share insights to our data - sourcing and operational framework.

At our organization, we strictly view data delivery not just as a service but as a discipline rooted in multi-channel sourcing and a strategic supply chain. Our proprietary panels are built using a strict Double Opt-In (DOI) model. We source respondents through three primary, compliant channels.

Panel Sourcing Channels

- 1. Strategic Publisher Networks: Localized digital publishers, loyalty programs, and utility apps in US, UK, APAC. Users explicitly opt-in to share opinions for transparent rewards.
- 2. B2B Professional Networks: Targeted LinkedIn outreach, professional association partnerships, and newsletter recruitment for verified decision-makers.
- 3. API-Driven Programmatic Sourcing: Secure API integrations with trusted local supply partners adhering strictly to ESOMAR standards for sudden volume spikes.

Panel Engagement & Retention

Acquisition is only half the battle — maintaining a healthy and responsive panel is where we excel.

- Continuous Panel Cleaning: Quarterly hygiene checks to remove inactive/disingenuous accounts, keeping our database fresh and highly responsive.
- Gamified Retention & Fair Rewards: Panelists are incentivized via industry-standard digital rewards (Amazon Vouchers, PayPal) to ensure low attrition and high data fidelity.
- Community Growth & Member-get-Member: Apart from our primary source channels, we actively leverage Member-Get-Member referral programs and customized digital micro-communities for niche audiences. These are done to ensure long-term panel loyalty and to keep our database fresh, active and compliant.

6. Objections: Q&A

💡 YAAD RAKHNE KA TARIKA

Isse ratta mat karo — sirf LOGIC samjho. Har objection ka core answer ek line mein: fatigue → 30-din quarantine; proof → audit trail, PII nahi; re-contact → encrypted ID mapping; formats → 3-tier delivery. Client jo bhi pooche, isi logic se jawab ban jayega.

Objection: If we run a tracker study or multiple waves with you, will we run out of people? How do you handle survey fatigue?

RESPONSE

"We actively manage panel hygiene to protect data freshness. We enforce a strict 30-day quarantine rule across our system. Once a respondent completes a major study for a specific sector, they are rested and automatically restricted from participating in a similar study for the next 30 days. Because we constantly refresh our 25,000-strong core panel and rotate them systematically, your tracker waves or multi-stage projects will always receive organic, unbiased, and high-yield insights rather than fatigued responses."

Tip: We don't blindly spam people. We calculate the Incidence Rate (IR) before launching. If we are looking for a rare cardiologist, we know the IR will be 5%, so we scale up our invitations accordingly to deliver your exact sample size on time.

Objection: "How do I believe your panel is verified? What proof or respondent information can you share with us?"

RESPONSE

"Due to strict global data privacy regulations (like GDPR and local privacy laws), we never share Personally Identifiable Information (PII) such as names, phone numbers, or email addresses. However, we ensure 100% transparency by sharing a complete Respondent Audit Trail with your final data. For every single response, we provide:

1. A unique, anonymized Panelist ID.
2. Digital Fingerprint Metrics (Device type, OS, and localized IP status).
3. Time-Stamp & Velocity Logs (Proof of how many minutes they took to read and answer).
4. Full Demographic Profiling Data (Verified Age, Region, Profession, and Income tier filled out during their double opt-in onboarding).

This gives you absolute, mathematical proof of data integrity without violating privacy laws."

Tip: Red Herring Question, Option C. to eliminate bots

Objection: "If we want to do a longitudinal study or re-contact the same respondents after 3 months, how will you manage that without giving us their personal info?"

RESPONSE

"Re-contact surveys are one of our core strengths, and we manage them through an encrypted ID Mapping System. In Wave 1, every respondent is assigned that unique, masked Panelist ID. When you want to launch Wave 2, you simply give us the list of IDs you want to follow up with. Our backend database decrypts those IDs internally and sends a direct, personalized invitation to those exact same

individuals. This allows you to track shifts in consumer behavior over time with 100% sample consistency, while keeping the entire process fully secure and legally compliant."

Objection: "In what formats will you deliver the final data, and how can we track the progress?"

RESPONSE

"We provide data delivery tailored to different stakeholders in your organization. We offer a three-tier data delivery model:

1. For your Data Analysts: We provide fully cleaned, labeled Raw Data in Excel, CSV, or SPSS (.sav) formats, complete with a detailed Data Dictionary and our unique, anonymized Panelist IDs.
2. For real-time tracking: We grant you access to a Live Interactive Dashboard (via secure web link). You can login at any time during the fieldwork to see real-time charts, geographical splits, and completion rates as they happen.
3. For your Executive Team: We deliver a final, boardroom-ready Executive Summary in PPT/PDF format, highlighting the core insights, major trends, and data visualizations so your leadership can make immediate decisions.

We sell Clean Insights, not Email Lists. Anyone can buy a list of emails online, but we provide an audited, legally compliant, and fully trackable respondent ecosystem."

Tip: Before we trigger any data format delivery, the raw file goes through our internal Data Quality Check (QC). We run clean-up scripts to remove any incomplete responses or speeders, so the data you open in Excel or see on the Dashboard is 100% pure and actionable.

7. Quality Control Hub

💡 YAAD RAKHNE KA TARIKA

Sirf ek positioning yaad rakho — "India = ops/QC hub, respondent source nahi." Fraud detection ke 2 point: device fingerprinting + ISP/IP scrubbing. Cheat-sheet wala "kya bolna hai vs kya nahi" samajh ke practice karo, ratta na maaro.

HQ QUALITY CONTROL HUB POSITIONING PITCH

"Our team in India does not generate the respondents. We operate strictly as a Data Operations and Quality Control Hub. The respondents are 100% native to their respective regions (US/UK).

Our operational infrastructure uses centralized, cloud-based data middleware to monitor traffic routing. We deploy localized node testing simply to audit survey links, ensure scripting works across geographies, and check client-side redirects. Our role is strictly sample management, data cleansing, and pre-field auditing to ensure only high-quality, verified native respondents reach your end-link."

Fraud Detection

We understand the industry-wide risks regarding server-side integrity. That is why our routing framework is embedded with multi-tier digital fingerprinting. Every respondent from our network must pass a silent, real-time security check before they enter your survey:

- Device Fingerprinting: We analyze canvas elements and hardware footprints to ensure no single user is multi-accounting or duplicating completes.
- ISP/IP Fraud Scrubbing: We automatically block and terminate any incoming traffic originating from known public datacenters, commercial VPNs, or dirty proxy networks. We only allow clean, residential ISP-grade native connections to pass through.

Cheat-Sheet: What Words to Use vs. What to Completely Avoid

☒ Never say this (local / unprofessional)	☒ Better corporate term to use
"Hum India se proxy lagakar chalte hain."	"We operate a centralized Data Hub managing localized publisher networks."
"Hum freelancers/boys se survey karwate hain."	"Our proprietary panels and authenticated target groups execute the fieldwork."
"Link block ho gaya ya dead ho gaya."	"We experienced a technical timeout on the client-side router/redirect loop."
"Sasta rate de denge."	"We offer highly competitive, volume-tiered Cost-Per-Interview (CPI) structures."
"Hum GoLogin browser use karte hain."	"We deploy isolated sandbox environments for rigorous internal quality auditing."
"Proxies lagate hain."	"We deploy premium, ethically sourced, residential ISP-grade nodes to simulate natural end-user routing environments for deep geographical precision."

8. Handling Objections & Commercials

💡 YAAD RAKHNE KA TARIKA

4 objections ka ek-ek line jawab yaad rakho: Cint/Dynata → hum gap fill karte hain; rejections → transparency + replace; commercials → pehle CPI, phir MSA; compliance → ESOMAR + GDPR + TLS. Logic se bologe to natural aur confident lagega.

Objection 1: 'We already have Cint / Dynata. Why onboard Exazon?'

RESPONSE

but

"Enterprise panels are incredible for broad consumer data, but they often fall short when it comes to hyper-targeted B2B niches or specialized healthcare segments where fatigue is high. Major agencies use Exazon as a strategic tactical partner. When your primary panels run dry, or when you face highly

11

restrictive quotas that require niche routing and tight quality control, we step in to fulfill the remainder cleanly without compromising your data integrity score."

Objection 2: 'How do you handle rejections and clawbacks?' Our end-clients have zero tolerance for data fraud.

RESPONSE

"We align perfectly with that policy. Exazon operates on a complete transparency-first delivery model. We review client-side logs weekly or bi-weekly depending on the tracker's cadence. If your internal compliance flags an ID for speeder behavior or poor open-ends, we don't argue — we analyze the raw mapping data, replace the complete instantly, and update our pre-screening algorithm to block that specific device pattern. Our goal is to ensure your final net dataset is pristine."

Objection 3: 'What are your commercial models?'

RESPONSE

"We are highly flexible and align with standard agency protocols. For initial pilot projects, we work on a standard Cost-Per-Interview (CPI) basis, calculated strictly on successful, verified completes that pass your quality screening. Once we establish a baseline and move into recurring monthly or quarterly trackers, we can look into structured master service agreements (MSAs) with volume-tiered pricing."

Objection 4: 'Are your panels ESOMAR and GDPR compliant?'

RESPONSE & DATA SECURITY

"Absolutely. Data privacy and respondent ethics are non-negotiable for us. All our sourcing channels strictly adhere to ESOMAR guidelines and are fully GDPR compliant. Every respondent goes through an explicit double-opt-in process where they understand exactly how their anonymized data is utilized for research purposes."

We deploy premium, ethically sourced, residential ISP-grade nodes to simulate natural end-user routing environments for deep geographical precision.

Data Security and Encryption: All data flowing through our internal routing middleware is encrypted in transit using TLS 1.3. We strictly pass anonymized respondent tokens (UIDs); no Personally Identifiable Information (PII) ever touches our external routing lines, ensuring absolute GDPR compliance."

Short Notes: Legalities & Compliance (The Deal-Breakers)

You must be prepared for these terms:

- **NDA (Non-Disclosure Agreement):** This is mandatory. You will be seeing unreleased products, secret ad campaigns, and confidential political polling data. You must sign a comprehensive NDA and ensure your internal team understands that leaking a client's survey concept means massive legal liabilities.
- **MSA (Master Services Agreement):** Once you pass the pilot testing phase, you will sign a master contract that defines the long-term legal relationship, liability limitations, and baseline pricing grids across all regional waves.
- **ESOMAR Professional Code Compliance:** The European Society for Opinion and Market Research (ESOMAR) sets the global standard.

Your Policy: "Exazon Research operates in strict compliance with the ICC/ESOMAR International Code on Market, Opinion, and Social Research and Data Analytics."

9. Payment Terms and Reconciliation

YAAD RAKHNE KA TARIKA

Sirf numbers yaad rakho: 72 hours (quality flag rule), 5th of month (reconciliation cutoff), 5% (discrepancy cap), Net 30 (payment terms), \$500 (minimum invoicing threshold).

Rejection & Reconciliation Protocols (Setting Boundaries)

1. **The 72-Hour Quality Flag Rule:** We require our clients to flag initial quality concerns or suspected speeders within 72 business hours of sample delivery so we can pause routing and optimize mid-field.
2. **Monthly Reconciliation Cutoff:** Final reconciliations, deduplications, and clawback logs must be formally locked by the 5th of the following month. Subsequent rejections are not eligible for credit.
3. **5% Discrepancy Margin Cap:** If client-side rejections exceed 5%, Exazon requires raw system event logs. We do not absorb clawbacks caused by client-side script errors or late quota overshoots. E.g. Agencies often try to reject completes due to their own design flaws (e.g., poorly written questions causing high drop-offs). Our Policy: If client-side rejections exceed a standard 5% discrepancy margin on a project, Exazon requires the raw system event logs. We do not absorb clawbacks caused by system-side script errors or late quota overshoots on the client panel.
4. **Payment Terms & Thresholds:** Standard Net 30 payment terms backed by monthly consolidated invoicing in USD (\$) or Euros (€) via SWIFT, with a minimum monthly invoicing threshold of \$500 per currency stream.

10. Discovery Questions to Ask Clients (Tool & Security, Policy)

YAAD RAKHNE KA TARIKA

Inhe ratta mat lagao — ek checklist samjho jo aap meeting mein pooch sakte ho: platform, security integration, deduplication, termination parameters, reconciliation cadence, feasibility, media-heavy elements, open-ended coding.

- **Platform Check:** 'Which platform is this survey currently scripted on? Are you utilizing Decipher, Qualtrics, Confrontit, or a proprietary internal tool?'
- **Security Integration:** 'Regarding redirect loops, are your systems integrated with secure cryptographic hashing (SHA-256), or do we pass simple unique respondent IDs for tracking?'

- Deduplication Protocol: 'Does your script deploy server-side deduplication against marketplace routers, or will our panel traffic be vetted against your internal database only?'
- Termination Parameters: 'What are your precise client-side termination parameters? Are you flagging speeders based on a strict 1/3rd of median LOI metric, or do you run manual audit sweeps for open-ended quality? What is the exact termination point policy? Do you track and credit partial completes if a respondent gets disqualified after completing 80% of the interview?'
- Reconciliation Cadence: 'What is your field cadence for data reconciliation? Do we review diagnostic data weekly, or run a single consolidated sweep post-fieldwork?'
- Feasibility & Specs: 'Could you share the exact target group (TG) definition, incidence rate (IR) assumptions, LOI, and device constraints (mobile-optimized vs desktop matrix questions)?'
- Media-Heavy Elements: 'Are there any media-heavy elements (like video ad testing) that require high-bandwidth residential nodes?'
- Open-Ended Coding: 'Are there any open-ended questions requiring native language manual coding or sentiment verification?'

11. Selective Clients (No Collab)

YAAD RAKHNE KA TARIKA

Sirf ek line yaad rakho: "Hum selective hain — InnovateMR/Azure Surveys jaise vendors avoid karte hain (transparency/security reasons se)." Pre-live simulation = 5-complete test run before going fully live.

Vendor Selectivity Pitch (Bad Vendors Positioning)

VENDOR SELECTIVITY STATEMENT

"Just to be transparent, we are quite selective with our vendor network. We intentionally avoid working with providers like InnovateMR or Azure Surveys due to ongoing concerns around transparency, security compliance, and responsiveness.

Although NDAs limit what details we can disclose, we prioritize working with top-tier partners to ensure your project gets the highest level of quality and security. We know the market inside out, and we only align with partners who match our standards."

To give you a clear picture of how we operate: quality and transparency are our top priorities. Because of this, we are very selective about the partners and vendors we work with.

There are certain vendors in the market — such as InnovateMR, Azure Surveys, and a few others — that we consciously choose not to collaborate with. This is primarily due to recurring challenges regarding data security, non-transparent pricing structures, quality control, and poor responsiveness.

While we have strict Non-Disclosure Agreements (NDAs) in place that prevent us from sharing specific details, our goal is always to protect our clients' interests and maintain high standards.

On the flip side, we maintain strong, trusted partnerships with industry leaders like [GO / TO / Insert Good Partners Here], where we have complete alignment on compliance, speed, and data integrity.

We share this because we want you to know that we thoroughly understand the market landscape, and we only bring vetted, reliable solutions to the table for your project.

Pre-Live Simulation Run (Vendor Test)

PRE-LIVE QUALITY TEST

"Before we white-list your team IDs on our live global tracking routers, our ExaVerify™ framework requires a mandatory 5-complete simulation run.

We will deploy a standard test script to evaluate proxy stability, response cadence, and open-ended text integrity. Once our data operations hub flags your test data as 'Green', your live quota allocation will be activated immediately."

12. Soft Launch

YAAD RAKHNE KA TARIKA

2 numbers pakdo: 10% soft-launch (data mapping check) aur 20-complete trial (closing hook jab client hesitant ho ek massive project dene se).

What are your expectations regarding the soft-launch sample size? Are we looking at a standard 10% soft-launch to check data mapping before scaling?

To Close the Deal: Looking at your current multi-market tracker requirements, where are you experiencing the highest sample depletion or quota bottlenecks right now? Which specific niche can Exazon step in and fulfill for you in the next 48 hours?

THE CLOSING HOOK (if client is hesitant to give a massive project)

We know that your reputation with your end-clients relies on the integrity of the data you present. We would love to demonstrate our capabilities on an upcoming project.

"Let's not do a massive contract today. Give us your hardest, most stubborn niche quota on an active project. Let us run a 20-complete soft launch. Review our data quality, inspect our turnaround time, and let our performance do the talking."

We balance speed with precision. Sometimes speed is the enemy of integrity.

Subject: Exazon Research // Strategic Fieldwork & Sampling Capabilities — Follow-Up

Dear [Client Name],

Thank you for taking the time to connect with me today. It was a pleasure discussing how Exazon Research can act as a high-integrity sampling and data operations partner for [Client Company Name].

As discussed during our call, we are fully equipped to absorb your volatile or hard-to-reach niches across B2C, Premium B2B, and Healthcare verticals without compromising data infrastructure compliance.

To quickly recap our operational and technical alignment:

- The ExaVerify™ Advantage: Every respondent passes through our proprietary pre-screening layer, checking hardware-level device fingerprinting and localized residential ISP routing to eliminate data fraud before reaching your client-side link.
- Commercial Realignment: We operate comfortably on standard Cost-Per-Interview (CPI) baselines and align seamlessly with corporate procurement cycles (Standard Net 30 terms).
- Reconciliation Transparency: We maintain a strict data sanity dashboard and request fieldwork diagnostic logs within 72 business hours to optimize real-time routing efficiency.

Next Steps for a Pilot Execution: We would love to demonstrate our operational turnaround capabilities. Please share the target group (TG) definitions, estimated Incidence Rate (IR), and tracking script links for any active bottlenecks or open quotas you are currently facing. We are ready to execute a 20-complete soft-launch immediately to validate our data mapping.

Looking forward to a long-term, data-secure partnership.

Best Regards,

Shavaz
